ROADMAP

10 MIN

CLASS

VueJS is a **JavaScript framework** to create a **reactive** web application easier

Explain this word

Explain this word

Explain this word

A language, running on browser to
manipulate the running page
(with the DOM)

A Library of methods + A set of
rules, to guide you to build an
application

VueJS is a **JavaScript framework** to create a
reactive web application easier

reactivity is the possibility to
refresh page element without
refreshing the whole page

10 MIN

CLASS

Find the defaults of plain JS ?

```
const buttonEl = document.querySelector('button');
const inputEl = document.querySelector('input');
const listEl = document.querySelector('ul');

function addGoal() {
  const enteredValue = inputEl.value;
  const listItemEl = document.createElement('li');
  listItemEl.textContent = enteredValue;
  listEl.appendChild(listItemEl);
  inputEl.value = '';
}

buttonEl.addEventListener('click', addGoal);
```

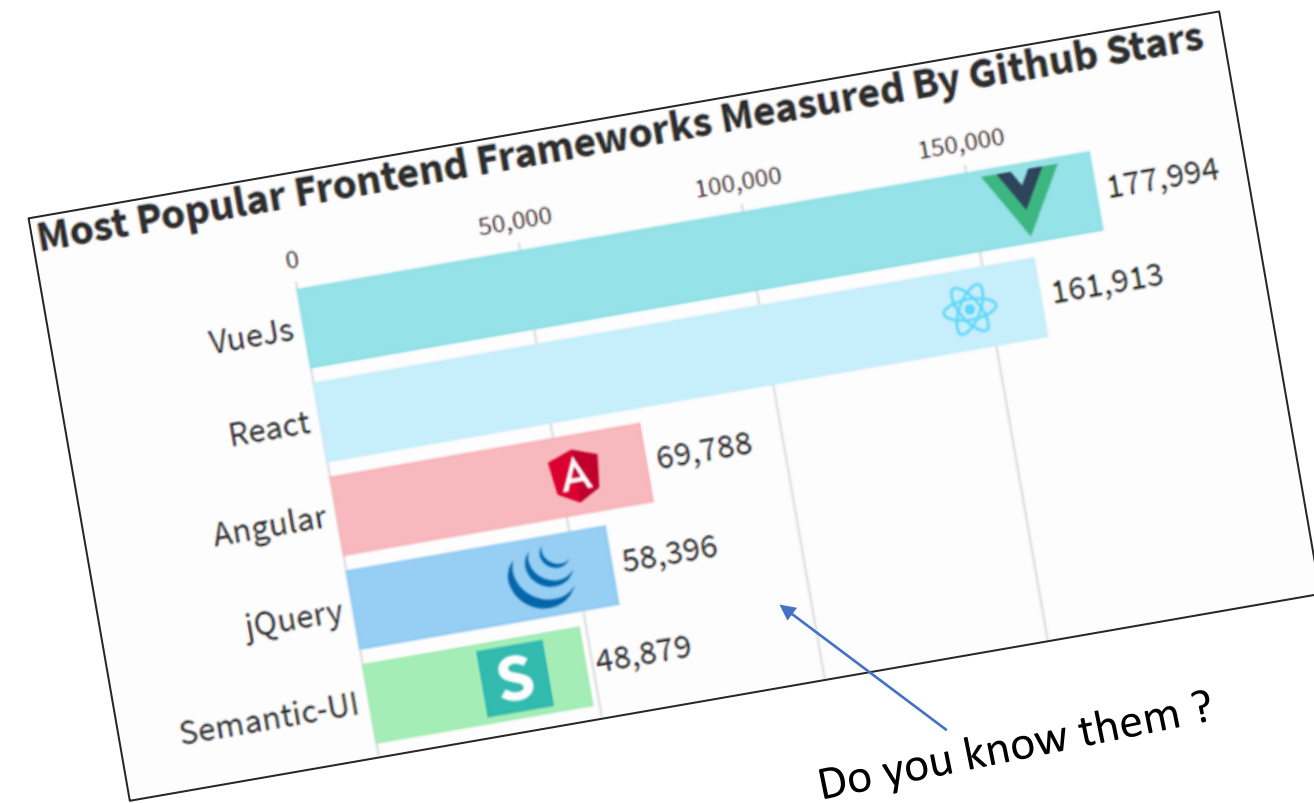

1 - Demo - vanilla JS code

VUE has a different
approach !

- ✓ Templates
- ✓ modules
- ✓ Data binding

Why Vue.JS ?

- ✓ One of the **most popular**
- ✓ Still **growing actively**
- ✓ **Easy** to learn
- ✓ Single page app

10 MIN

CLASS

2 different ways to use Vue

Vue can be used to **control parts** of HTML pages or entire pages.

For now we will use this way

Vue can also be used to **control the entire frontend** of a web application

Single Page Application

0 WHY VUE ?

1 DATA BINDING

2 LOOPS / IF/ELSE

ROADMAP

10 MIN

CLASS

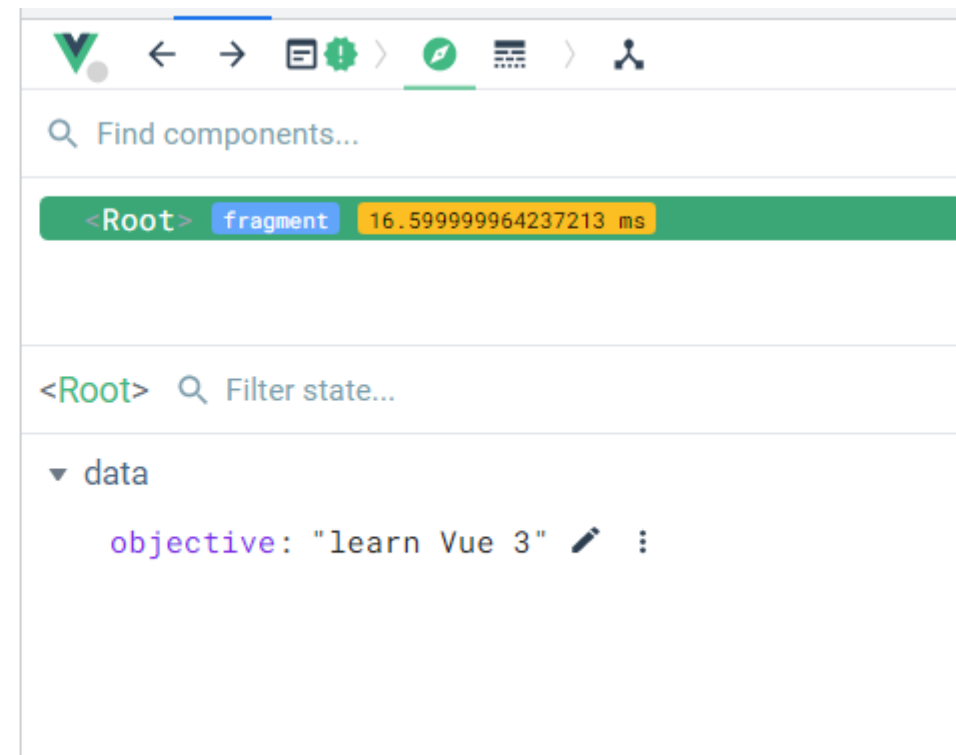

2 - Demo - create vue app

Let 's create our first Vue app

Vue Course Goals

Objectives of this course

learn Vue 3

20 MIN INDIV

Create a Vue app in 5 steps !

1 – Import the last Vue framework (Vue 3)

```
<script src=https://unpkg.com/vue@next defer></script>
```

2 – Create a Vue app

```
const app = Vue.createApp({  
});
```

3 – Mount the Vue app to a specific DOM element

```
app.mount("#ronan");
```

 `<section id=" ronan ">`

4 – Create a data

```
data() {  
  return {  
    objective: "learn Vue",  
  };  
},
```

5 – Bind this data on HTML

```
<p>{{objective}}</p>
```

10 MIN

CLASS

Like teacher Rady !!

{{ }} MUSTACHE

SCRIPT

Provide
Data

```
const app = Vue.createApp({  
  data() {  
    return {  
      objective: "learn Vue 3",  
    };  
  },  
});  
app.mount("#app");
```

Mount
DOM element
to VUE app

TEMPLATE

DOM element
to mount

```
<div id="app">  
  <p>{{ objective }}</p>  
</div>
```

Mustache

10 MIN

CLASS

What is data binding ?

10 MIN

CLASS

Can we put the `{{}}` outside of the vue app ?

```
app.mount("#app");
```

```
<body>
  <header>
    <h1>Vue Course Goals {{ objective }}</h1>
  </header>
  <section id="app">
    <h2>Objectives of this course</h2>
    <p>{{ objective }}</p>
  </section>
</body>
```

20 MIN

INDIV

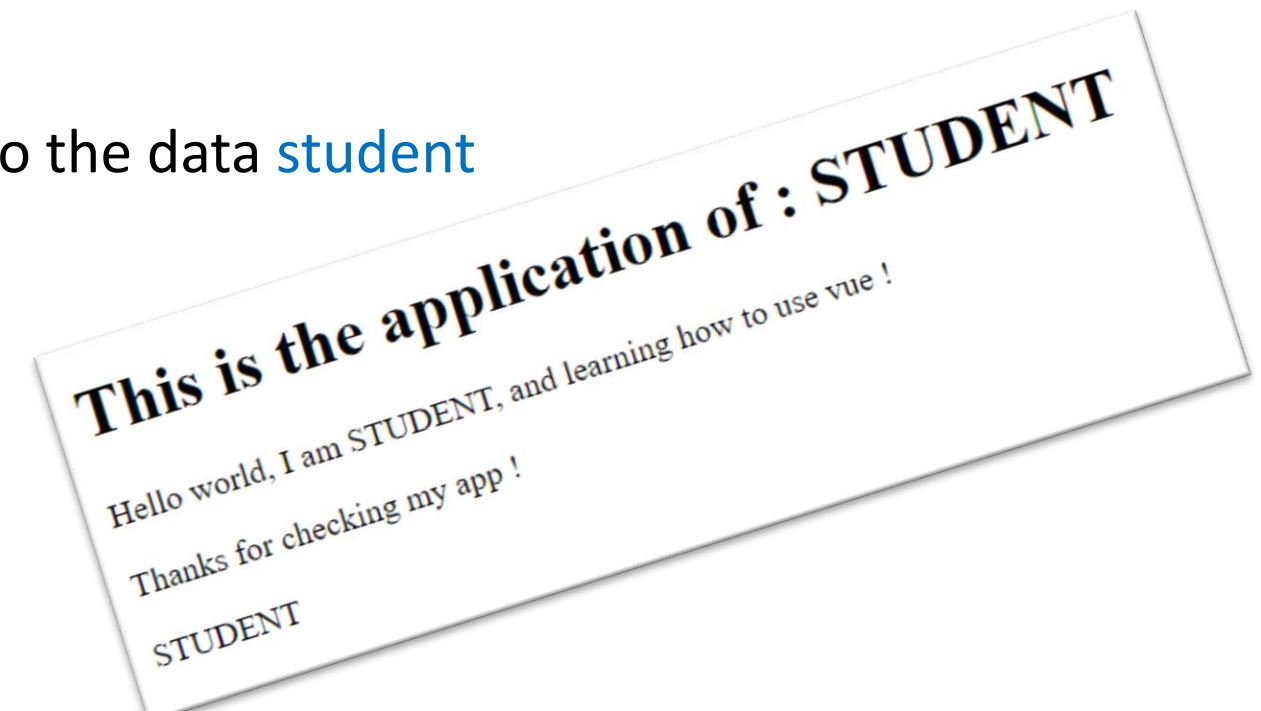

Activity 1

SCRIPT

- ✓ create a Vue app and **mount** it to the div **your-app**
- ✓ Create the data() and define a variable **student**

HTML

- ✓ Bind all **STUDENT** values to the data **student**

20 MIN

INDIV

Activity 2

SCRIPT

- ✓ create a Vue app and **mount** it to the div **your-app**
- ✓ Create the `data()` and define variables : color, song, teacher

HTML

- ✓ Bind all data values

My favorite color:
My favorite song:
My favorite teacher:

What you learnt

- ✓ Why should we use a framework on front end
- ✓ How to **create a VueJS app** and mount it to a DOM element
- ✓ How to **bind a data** using the **mustache** {{ }}
